

USCIS TORCH API DEMO CHECKLIST

Introduction

For your API Demo, a representative from your company must show the API working in a live environment, using real workflows and appropriate data. This demonstration should clearly show how end users interact with the system and how it performs in real time. We will also review backend functions. During the demo, USCIS may ask questions and will reserve time at the end for any additional follow up. Staged demonstrations, mock data scripts and external testing tools are not permitted except to run cron/batch jobs outside their normal schedule.

Frontend U/I Requirements

- **Screen Sharing:** Be prepared to share your screen and walk through applicable workflows. Review the Teams instructions in your calendar invitation and try it out before your demo.
- **App Usage:** Briefly explain how your app uses the API and who will use it. Please do not include unrequested information about your company. We do not have time for presentations.
- **Sandbox Testing:** Run HTTPS responses in real time. Show both success and error responses, and correct handling/display in your UI.
 - **All Apps:** explain request flow, protocols, request/response structure, headers, payloads, authentication/authorization. Architecture diagrams are optional,
 - **Web Apps:** Show browser's developer console network tab for API requests/responses.

Backend Data Requirements

- **Authentication:** Demonstrate the authentication between the frontend and backend of your application.
- **OAuth 2.0:** Demonstrate protection of Client ID/Secret, using environment variables or a secret manager. Show code for token handling and authenticated API requests.
- **Batch Updates:** If your app does batch updates, you must manually run the script during the demo and show both success and error responses. Please be prepared to explain how often batch updates are run.

Important Notes

*Applicants who have Vibe-coded applications (used AI to build their application) must be able to demonstrate and explain all expected front and backend requirements. USCIS strictly prohibits using commercial AI tools in web-conferencing meetings. **This includes third-party AI bots, such as notetakers.***

To cancel or reschedule your demo, please use the links found in your confirmation email. Please provide at least 48 hours' notice of cancellation or rescheduling. For questions/issues please email developersupport@uscis.dhs.gov.
